

## The SWITCH®

### Power Transfer between ESPs

The SWITCH® is a world first in artificial lift innovation and is designed to allow the operation of two ESPs from a single power cable from surface, expanding the options for multiple ESP configuration. This patented product is fully qualified and delivers significant reductions in operating and capital costs, planning and lost production time. Avoid unexpected workovers when your pump fails - simply transfer the power to the secondary pump and production continues with minimum delay.

#### Key Benefits

- Retrofit Single ESP Well to Dual ESP
- Triple and Multiple ESP Applications
- Intelligent Well Completions (SmartWells)
- No Specialist Equipment Required
- Eliminates Unexpected Workovers
- Increased Production and Substantial Cost Savings

Continual Production with SWITCH v Workover and Deferred Production due to Pump Failure
